## DYMO Thermal Label Printer

This is the big gun of peel and stick labelers, from tiny up to 4 x 6. If you do a lot of filing, archiving, or storing of anything this will save you time in labeling and hassle of them falling off.

## Brother Thermal Label Printer

A bit smaller in size and a little better price, this brother peel and stick labeler can do most of the thing they Dymo can.

## Fujitsu ScanSnap

The best all in one scanner. When you search scanned documents it not only searches by title, but for keywords in the document. The Scan Snap also has updated PHOTO SCANNING capability, either by album or individually. You can scan stack of papers in one sitting (up to 50 pages) , very little jamming as long as papers are not stapled. It is also very fast for a scanner! I love the fact that it has a feeder guide for receipts and smaller documents. The lid folds closed making it very compact when not in use

## Mobile ScanSnap

If space is an issue, this portable scanner can be great, but is only one page at a time, and operates on batteries! Best for scanning documents.

## Brother P-Touch Label Maker

I love, love. LOVE a label maker. Did you know when things are labeled, it greatly increases the likelihood the item goes back where it belongs? This little guy is so versatile and you can get colored tape, wider, narrower and lots of options.

Tape options:

Multicolor Tape , White Tape , Clear Tape , Clear Tape w Color Font

## Small Flat Plug Power Strip

Flat plug extension cords are the best. Furniture can fit tight to the wall, and these have grounded 3 prong access, plus USB-A and USB-C ports.

## Mini Power Strip

Also in a larger plug size, slightly different wall plug but still flat

## 100 Pack Nail in Cable Clips

Flat plug extension cords are the best. Furniture can fit tight to the wall, and these have grounded 3 prong access, plus USB-A and USB-C ports.

## Task Timer

This task timer is my fave. Flip it to the time count you need and get to work on any task.
